

## Pneumonia Proves Fatal To Dr. John Esler, Cereal

Interred at Hanna With Full Masonic Orders

Hero of hundreds of emergencies, and the only physician practicing in the area extending from Empress north to Oyen and east to Hanna during the past drouth years, Dr. John Esler, 65 years, died in the Cereal hospital Friday night of pneumonia.

He was taken ill while on the road, trying to reach a distant patient in the vast area which his practice covered.

For 15 years, Dr. Esler faithfully served the Cereal and Chinook districts, and more recently had to cover the entire field himself. In addition to his other duties, he maintained the Cereal Hospital, conducting all its medical affairs.

Almost every homestead in the area knew him, and he ministered to other small towns. He traveled mainly by car, battling snow-drifted roads

and piercing wintry winds, or plowing through almost impassible muddy roads. When his car could not get through he would use a horse and buggy, a farm wagon, or any vehicle that could be found. If these failed, he would go on foot.

Railway travel was another means used by the doctor, but he was quite unorthodox in choice of vehicles.

Dr. Esler was 65 years old when death removed him from the community in which he first settled as a farmer in 1909. He was born in Blake, Ontario, in 1874, graduated in medicine, and married in Blake before coming West.

Funeral services were held in the Cereal Community hall on Tuesday afternoon with Rev. J. W. Smiley, of Oyen, officiating. The hall was filled to capacity and many were obliged to remain outside.

During the service Mrs. Hall, of Cereal sang "Does Jesus Care". The funeral cortege proceeded to Hanna where interment was made with full Masonic orders. Dr. S. E. C. Argue, of Hanna, Lodge A. F. & A. M. took charge of the service at the graveside. Many beautiful floral tributes were received from far and near testifying to the high esteem in which Dr. Esler was held.

When Dr. Chandler's practice became available in 1923, he bought it and settled down to practice his profession.

It was not long after that he was able to establish a sorely-needed community hospital, where he treated some 200 patients each year. Because fine community service rendered by the institution, it now receives a government grant.

Dr. Esler leaves two daughters, Mrs. Margaret Vanstone, of Brooks, and Mrs. Dorothy Bremner, of Vancouver. A brother Allen Esler, of Bawlf, and three sisters Mrs. O'Connell residing in Ontario, and the Misses Elizabeth and Marcella Esler of Minneapolis also survive.

Mr. and Mrs. Lee and family motored to Drumheller Wednesday, where their daughter and son in law, Mr. and Mrs. Jas. Aitken, met them. Mrs. Lee, Virginia and Billy, returning with them will visit at their home at Kirkcaldy for a short time.

Mr. Nuden, C. N. R. Re-Ins Agent, is in town for a short time.

## SEARLE PRECIPITATION REPORT NO. 5.

(Compiled from 182 Rain Gauge Reports)

The precipitation which has occurred from April 1st to June 27th, inclusive, combined with that which occurred last autumn during the months of August, September and October, and weighted for wheat acreage, shows the moisture condition for the three Prairie Provinces as a unit to be 86 per cent of normal, as compared with 88 per cent last week and 90 per cent for the week before that.

The moisture condition in Alberta on June 27th was 90 per cent of normal as compared with 92 per cent last week and 97 per cent for the week before that.

For Saskatchewan, on June 27th, the condition was 84 per cent as compared with 86 per cent last week, and 89 per cent for the week before that.

For Manitoba, on June 27th, the condition was 85 per cent as compared with 84 per cent for the previous week and 87 per cent for the week before that.

As this report is being compiled precipitation is still occurring over various parts of the Prairie Provinces, some portions of north-west Saskatchewan and Alberta, being the recipients of much needed moisture.

## Too Good

Lewis, Que (C. P.) — when police here received a report of a brutal and bloody assault in a grove at nearby Martine, two constables raced on only to find the youthful cook of a scout camp, his face painted with crushed strawberries and tied to a tree, playing with all his dramatic ability the tragic role in an open air, scout play.

## Unnoticed by Crowd.

Hero May Lose Hand

New York (A. P.) a feat of heroism unnoticed in crowded street, may cost Harry Meyers, 42-year-old glazier, his right hand.

Thirteen storeys up, Meyers grabbed a heavy, jagged, triangular piece of plate glass as it fell toward the street and held it until his screams brought help.

A tendon and two muscles of the right wrist were severed

## Pool Meeting Was Great Success

The Wheat Pool meeting which was held on Thursday, June 30th, in the ballroom of the Chinook Hotel was a great success. The large hall was filled to capacity. Mr. Falconer very ably addressed the meeting, giving a summary of the financial report for the year. A comedy picture was shown, followed by the main picture which was very educational. Mr. W. Pettinger, Alberta field service man, gave a short, interesting speech to the boys and girls of the audience.

### A Livelier Education

While considerable strides have been made in recent years towards the goal of a more attractive educational program for the children in both public and high schools, experimentation shows that further steps can yet be taken before the people and educational authorities of this country can proclaim that the ultimate has been reached.

It is a sine qua non that the more attractive school curricula can be made, the greater the interest that can be secured and, therefore, the greater the interest, the more productive will be the results.

The older generation can well remember the days when history was largely comprised of a long list of dates, tabulated unrelated events and complicated genealogical trees; when a lesson in geography meant commitment to memory the fact that certain cities and towns are located on such and such rivers and are noted for the manufacture of this or that commodity, while nature study, what little there was of it, consisted of poring over books to determine by sheer feat of memory the difference between a sepal and a petal and to differentiate between stamens and pistil, and who that is old enough to have lived in those days can forget the agonies that were undergone to try and remember, let alone understand, that the square on the hypotenuse of a right angled triangle is equal to the sum of the triangles on the other two sides, when taught from a book full of geometrical designs studded with theorems and hypotheses.

#### Some Steps Forward

As indicated at the outset the science of education has moved forward considerably since those dark days and something has been done to make these and other subjects more alive and interesting and, therefore, more readily comprehensible and more easily assimilated than in the days of the youth of the present older generation.

While that is true no one would have the hardihood to say that the end of the road has been reached and that something more might not be done to remove the rocks from the paths of learning.

The younger children largely live in a land of make-believe of their own devising and to some extent educational authorities have made use of this natural phenomenon to guide and develop their mentality through play acting.

As children develop they become more realistic and here again the wise psychologist takes advantage of the trend to pattern studies on the tableaux vivants order with an eye to practicality, and the pedagogues who adopt this viewpoint will get results where the teacher who merely follows the prescribed routine will find his or her students trailing far behind.

#### An Interesting Experiment

Giving point to this doctrine, an interesting experiment was carried out in the Regina, Saskatchewan, high schools during the last two weeks in June this summer when a special program for grades nine and ten students, who had been promoted and could not be required to attend classes the last two weeks of the term while their less fortunate colleagues were writing examinations, was put into effect.

This program comprised visits to industrial plants in the city, where processes of manufacture were demonstrated and explained to the students; a visit to the Parliament Buildings where the students conducted a mock parliament with considerable credit to themselves and their teachers; visits to the natural history museum and other institutions where much first hand, concrete information was readily grasped, supplemented by educational films and other attractive media for the assimilation of useful and practical knowledge.

Contrary to expectation the students did not think they had been cheated out of a well-earned extra holiday, but responded eagerly to this special program in the devising of which they had played a part, demonstrating the truth of the assertion that children are willing and anxious to learn, provided interest can be aroused and sustained.

#### Should Not Stop

What the ultimate result of the experiment will be, it is difficult to forecast, but in all probability it will lead to the adoption of more of such methods in the day to day curriculum of the year round.

What is being done in the larger city schools to stimulate interest can be done in the little red schoolhouses dotted all over the prairies on a smaller scale with revisions to suit local circumstances and conditions. The opportunity is there and it only requires adaptation on the part of the alert teacher with vision, to make education more realistic, more practical and more attractive with attendant greater and more enduring results.

#### Not Worth The Trouble

Englishman Who Risked Life To See Sultan's Harem Was Disappointed

Among the many distinctions of Lord Mottistone—formerly Sir John Seeley, Secretary for War, Under-Secretary for Air—who is 70, is that of being probably the only white man who ever saw the harem of Sultan Abdul Hamid and escaped alive. During a visit to Constantinople as a lad of 19 he was being shown round the Sultan's palace under guard of a huge soldier with a drawn scimitar, when he contrived to evade him, sped down a corridor, drew aside some curtains and gained a full view of Abdul's harem. It was very disappointing, he says, for all the women were fat and ugly!—Glasgow Bulletin.

Although neighboring countries appear to have been ignorant of the drink, Abyssinians used coffee as early as the 15th century.

Waterpower is sometimes called white coal.

#### Highway First Aid Depots

Canada Slow In Establishing Them  
States Red Cross Official

Canada's delegation to the Red Cross conference in London heard the Dominion is far behind Europe in the establishment of highway first aid stations and shared the committee's decision that stations should be established on rural highways at intervals of 30 miles.

The committee heard F. W. Routley of Toronto, director of the Ontario Division of the Canadian Red Cross, admit Canada had not reached Europe's development of highway first aid stations, but was making progress in treating victims, but in preventing accidents, because the Red Cross insignia on the roadside prompted cautious driving.

Birds that have drifted to new territory, where climatic conditions are different, gradually change in type until a subspecies is formed.

The world contains 35,000,000 telephone subscribers. 2262

#### His Proudest Memory

Engineer For 51 Years Has Never Had An Accident

Billy Gilbertson of Carlisle, England, who drove the famous Royal Scott express train 11,000 miles across Canada and the United States in 1933, has made his last trip—at the throttle of a yard engine. He retired in May on his 65th birthday. Gilbertson started his railway career on his 14th birthday as an engine cleaner and was paid six shillings (\$1.50) a week. He became a fireman in 1892 and a driver in 1901. During the 34 years he drove he saw express engines doubled in weight.

"When I started on the railway we still had some engines without cabs to protect engine-men from the weather," he said. The engines had "only hand brakes to stop them—if you were lucky."

The veteran driver received the British Empire Medal for meritorious service on his return from North America with the Royal Scot.

That he was decorated and drove King George V. in 1932 between Carlisle and Crewe are not Gilbertson's proudest memories. The proudest is his safety record. He has never had an accident.

#### Savages Provide Idea

Expedition Seeks Head-Shrinking Fidd For Dental Use

A concoction once used by South American savages to shrink and preserve human heads is being sought by a scientific expedition as an aid to modern dentistry.

Dr. Harry B. Wright, explorer, is heading the expedition into Ecuador to obtain samples of the liquid—known as chinchipi—which he said would be useful in stopping bleeding after a tooth extraction. Dr. Wright, a dentist himself, has made four expeditions into South America and has studied the fluid.

Since the government of Ecuador stopped the Jivaro Indians from taking heads, they use chinchipi on monkeys and sloths as trophies of the hunt, he said.

"The procedure is the same," the explorer explained. "They remove the skin and boil it in the chinchipi, which is made from wild vines. The skin shrinks down to about a fourth to an eighth of the original size."

C. Wistar Wood, secretary of the General Alumni Society of Pennsylvania University, will accompany Dr. Wright.

#### A Charming Spot

Minaki On The Winnipeg River Noted For Its Wild Beauty

Minaki is an Indian word which may be translated as "The Beautiful Country" and no other description could be so appropriate. About 114 miles east of Winnipeg and close to the boundary of the province of Manitoba, Minaki is a heavily forested country, watered by the Winnipeg river and its network of expansions and tributaries. Its wild beauty and the charm of sparkling streams, river and lakelets combine with climatic qualities to make an ideal summer playground. Of an altitude of nearly 1,700 feet above the sea level, its atmosphere is dry and invigorating and a tonic to tired and strained nerves. Hay fever is unknown.

#### Good Radio Reception

Decrease In Sunspots For Next Four Or Five Years

The world may expect a comparatively quiet period for radio reception and other communication during the coming four or five years. Dr. Harlan Stetson of the Massachusetts Institute of Technology predicted, for the number of sunspots is decreasing. Addressing the American Association for the Advancement of Science at its summer meeting in Ottawa, the Boston, Mass., astronomer declared the maximum intensity of activity on the sun was apparently reached in July, 1937.

#### The Smallest Ocean

The Mediterranean is the smallest ocean on the globe yet more famous in history than all others combined. A million square miles of warm, blue and peaceful seas with only one contributory river, the Nile, Sea of the ages, heroes of the Bible, of Greece and of Rome all knew it.

Dorothy—"Mother, what did you do when a boy first kissed you?"

Mother—"Nonsense, mind."

Dorothy—"That's funny. I did the same thing."

The Great Bear constellation was known as such by both the North American Indians and the ancients of the Old World.

Winnipeg is the greatest transportation centre in Canada, with the largest individually owned railroad yards in the world.

#### Outlaw Rules

The Enormous Power Given To Individual Men

The most significant and most disturbing fact in these troubled times is the enormous power of individual men. The future welfare depends upon the will of three men who are despots.

This situation is not a new thing in the world, for kings of old were autocrats whose slightest whim was law; but one must go far back in history to find such rulers who made themselves great.

The kings of modern times were ordinary men, guided by their Ministers. Moreover, they were restrained by certain codes of behavior and unwritten laws, for their first duty was to be gentlemen. And Christian gentlemen are not likely to be a menace to the world.

The new strong men are a different breed. They are not hampered by precedent or ethical standards or codes of morality. They never learned that certain things "simply aren't done" by gentlemen.

For they came up from the bottom, and they recognize no law but force and no rule but their own will.

They are as ruthless, as cold-blooded, and as conscience-free as any buccaneer who sailed the Spanish Main. Men of their kind—strong, daring, dominating—have slit throats and looted the earth since history began. They are the Genghis Khans, Tamerlanes, Alexanders, Napoleons.

Robert Quillen in "The Fountain Inn Tribune".

#### SO COMFORTABLE — DIVIDED SKIRTS

By Anne Adams

Sample the ease of movement you get with a divided skirt, and you'll always have one in your wardrobe! As for the making—it's easy as A B C, with Anne Adams' pattern 4647 giving easy-to-follow directions. A few seams—that's all! And the pleats will fall into place like charm—even if you are a beginner at dressmaking. Be sure to choose a heavy drill or linen, best of all, a wrinkle-resistant type. You'll feel as sleek as a seal, as correctly and smartly attired as a fashion plate, when you step out for golf, tennis, hiking, or a sail on the lake.

Pattern 4647 is available in waist sizes 28, 30, 32, 34 and 36. Size 36 takes 3½ yards 36 inch fabric. Illustrated step-by-step sewing instructions included. Send twenty cents (20¢) in coins (stamps cannot be accepted) for this Anne Adams pattern. Write plainly Size, Name, Address and Style Number and send order to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

#### Eider Ducks Resourceful

Use Lining Materials For Nest Lining If Down Removed

In addition to providing a new source of revenue for the inhabitants of the north shore of the Gulf of St. Lawrence, the eider-down industry is helping to build up the supply of wild ducks. The eider ducks produce this down on their bodies and place it in their nests as a soft, warm protection for their eggs. It has been discovered that the down can be taken from the nest, by the exercise of this care, without causing the duck to abandon incubation or interfering with the eventual hatching of the eggs. The duck replaces the down in the nest with leaves, straw, moss or similar materials that answer the purpose.

#### Over Niagara Falls

Jean Lussier May Make Another Attempt In A Rubber Ball

Jean Lussier, who rode a rubber ball to fame over Niagara Falls in 1928, is thinking of trying it all over again.

But if he does, he said, it will be with exciting variations.

For one thing, he will go over the rocky American fall instead of the gushing Canadian horseshoe. And his rubber ball this time will be bigger than before, increasing in size like a huge soap bubble as it begins the 165-foot drop.

Lussier, once a salesman in Springfield, Mass., was set adrift in a rubber ball in the Niagara river above the falls at 3:05 p.m., July 4, 1928. The ball was six feet in diameter.

At 3:34 p.m. a hushed crowd saw the ball sucked over the brink of the Canadian horseshoe, to reappear a few moments later in the rapids below. At 4:03 p.m. Lussier crawled out of the ball, showing only one small scratch as a souvenir of his experience.

Lussier says he has designed a ball eight feet in diameter. This would roll over the rocks toward the American fall, where the river is shallower. In falling, flaps on the side would spread out in a parachute effect.

#### Canada's First Oil Well

Plaque Unveiled Which Marks Site At Oil Springs, Ontario

The historic sites and monuments board of Canada, under the direction of Prof. Fred Landon, of the University of Western Ontario, unveiled July 1 at Oil Spring a memorial plaque to commemorate the first oil well in Canada.

In the earliest history of the locality of Oil Springs travellers observed the presence of oil, which they used for medicinal purposes. In 1858 James M. Williams dug the first well in Canada, later he established a refinery at Hamilton to manufacture illuminating oils. In 1861 John Shuy drilled deeper into the rock and struck the first flowing well, the location of which is on the south bank of Black Creek in Oil Springs. This well and the wells following were the biggest wells ever struck up to the present time in Canada.

Some of them had a flow of from 3,000 to 7,000 barrels per day. Finally these wells played out and the town became almost deserted. Then in 1885 and 1886 men drilled deeper again into Hano rock and discovered the wells which at the present time are still producing crude oil after 50 years.

Of 70,000,000 acres of land suitable for agricultural development in the province of Alberta, Canada, only 10,000,000 acres are actually cultivated.

One of every two persons living in Copenhagen, the Danish capital, owns a bicycle.

Pacific salmon are the most valuable fish in the western hemisphere.

#### Air Recruiting Campaign

Royal Air Force Has Asked For 31,650 Volunteers

Launching the greatest recruiting campaign ever undertaken by the Royal Air Force, Sir Kingsley Wood, secretary for air, has asked for 31,650 volunteers. Enrolment of the new flyers and technicians will begin at once.

Sir Kingsley called for 2,100 pilots, 650 observers, 20,000 specialized workers and 3,000 apprentices. The pilot recruits, who will have officer status, will be paid £340 (\$1,700) the first year and £380 thereafter during a four-year enlistment. Upon entering the reserves for six years they will be paid bonuses running up to £300.

Candidates for these posts must be between the ages of 17 and 25 years and must have a good primary education.

#### SELECTED RECIPES

##### THREE-FRUIT ICE CREAM

- ½ cup sugar
- 2 oranges, sections free from membrane and diced
- 2 bananas, mashed
- ½ cup cut maraschino cherries
- 1 package Lemon Jell-O Ice Cream Powder
- 1 teaspoon salt
- 1 quart milk

Add sugar to prepared fruit and let stand while ice cream mixture is being made. Combine Jell-O Ice Cream Powder and salt; add milk very gradually, stirring until dissolved. Freeze in freezer until thick but not hard; add fruit and continue freezing. Makes two quarts ice cream.

##### COFFEE ICE CREAM

- 1 package Unflavoured Jell-O Ice Cream Powder
- 1 cup evaporated milk
- 1 cup water
- 2 cups strong coffee
- 1 cup evaporated milk

Combine Jell-O Ice Cream Powder and sugar, add water and coffee very gradually, stirring until dissolved. Then add evaporated milk. Freeze in freezer. Makes about 1½ quarts coffee ice cream.

#### A Good Story Spoiled

Item About Ink Being Filched From Banks Is Analyzed

Some paragrapher started on its rounds an item saying it cost Canadian banks \$25,000 a year to keep up the ink supply. It was probably based on the fact that many persons filling their fountain pens. Most people with workable fountain pens doubt if public ink such as banks or post offices use would tempt them to pilfer that liquid. Beyond this altogether \$25,000 would probably buy 75,000 gallons of ink. Of Canada's 10,000,000 people, probably less than 2,000,000 own fountain pens. Of this probably less than 1,000,000 ever find their way into a bank. Of these, five per cent. would be a generous estimate of those filching bank ink. Fifty thousand people using 75,000 gallons of ink, figures 1½ gallons of ink per filcher—a lot of bank ink these days.—Brandon Sun.

A large collie dog has been observed running wild with a band of coyotes in Colorado.

**Daily use of**

Dentists recommend Wrigley's Gum as an aid to strong, healthy teeth, cleanses them of food particles, massages the gums, aids digestion, relieves stuffy feeling after meals. *Helps keep you healthy!* Take some home for the children too—they will love it! c-3

## WHAT HO!

—By—  
**RICHARD CONNELL**

By Arrangement With Thomas Allen, Publisher, Toronto.

### CHAPTER XIV.—Continued

"Good-by, Ernest," he said, "and may the gods who watch over the good bless you now and always."

"Good-by, sir," said Ernest, huskily. "And thank you for everything."

Rosa gave him her hand. He squeezed it so hard she gave a little cry of pain. Then, without another word, he turned and ran out of the castle, and jumped into the waiting car.

Ernest did not open the earl's farewell gift till he was in the train and on his way to London.

The package contained the earl's treasured collection of autographed photographs of motion picture actors and actresses.

Ernest began to laugh. Then, suddenly, he began to cry.

### CHAPTER XV.

There were no sounds of revelry by day in Bingley Castle as the wonky car, containing Ernest, clattered away making sounds like a fat tap-dancer on a tin roof.

"Rosa!"

"Yes, father?"

"Your blubbering again."

"Yes, father."

"Don't."

"Can't help it."

"Hall's no place for it," said the earl. "Too draughty. Let's both go to my study and have a good cry."

"I'll stop," said Rosa. "What's the use? I think I'll go riding with Emma after all."

"And I," said the earl, "shall go and do things to the zinnias."

He started out of the door, then stopped, turned and shouted, "Rosa!"

"Father? What's wrong?"

"I did meet that girl," said the earl.

"What girl?"

"Ernest's girl."

"You couldn't have."

"I did though."

"Ernest said she has never been in England."

"Master Ernest is a blooming liar. The carl caught his daughter's hand, and said,

"Come with papa. I'll show you."

They half-ran to the library. From a case the earl took an old album, rifled through its pages, and stopped at one.

"Who is that, pray?" he exclaimed, triumphantly.

Rosa bent over his shoulder and looked at the old picture and the inscription.

"Lucy Bingley," she said.

"Knew that girl of Ernest's had a Bingley nose," said the earl.

"But she's been dead a century and more," said Rosa. "He can't be engaged to her."

"It would be unconventional," said the earl.

"Why should Ernest lie to me like that?"

"Ask him."

"He must be hiding something."

"Who isn't? I mean, well, we all have our little secrets."

"I must know why he lied to me."

"Too late to catch him now, my dear."

"Father?"

"What?"

"Have you any money on you?"

"I've a half crown in a pocket somewhere."

"Is that all?"

"Yes. But Crump has sixteen pounds. He won it on a horse race."

**ITCH**

... STOPPED IN A MINUTE ...

Are you tormented with the itching tortures of eczema, malice, athlete's foot, eruptions, or other skin ailments? For relief and happy relief use cooling, antiseptic, liquid D. O. D. Preparation. It's gentle and sooths the irritated skin. Clear, granules and stink-free. Stop the itch. Stop the itching. Instantly. A 3c tin bottle, at drug stores, proves it—or money back.

I saw it."

"Get it."

"What for?"

"Never mind. Get it."

"Anything to oblige a lady," said the earl. "Where are you going?"

"To change my clothes."

"For riding?"

"No. I'm going to London."

"Right you are. We can just catch a train from Bristol if we step on the gas."

"We?"

"You and I."

"But why you?"

"Young lady," said the earl, "you're not the only Bingley that has a heart. Get a wiggle on."

As their train wormed its way into the heart of the metropolis, the Earl of Bingley and his daughter were finishing their session as a ways and means committee of two.

"Oh, you'll find him, never fear," the earl assured Rosa.

"But where? He left no address."

"Oh, rich Americans are always easy to find in London," said the earl. "In the morning one looks in the Bond Street shops, or in the Burlington Arcade, where they gather in droves to buy regimental stripe ties. At noon they are to be found in the Cheshire Cheese or Simpson's-in-the-Strand, lurking behind steak-and-kidney pies. Afterwards they are in the better West End bars. By evening they have flocked to the costlier night-clubs, and when these close they go to ground in the swankier hotels."

"I'll try the big hotels first," said Rosa.

"And I," said the earl, "shall follow his spoor from bar to bar along Piccadilly."

"I don't think you'll find Ernest in a bar. A book store is more likely. 'One never knows where one may find a will-o'-the-wisp like Ernest.'"

"He is unexpected," admitted Rosa. "Though why he concocted that elaborate fairy-story about a fiancée, I can't imagine."

"Rowena Castle!" chuckled the earl. "And that touch about her father owning all the pubs in Chicago?"

"Do you think he really has delusions, father?"

"Not that cucumber," replied the earl, emphatically. "We had many a pop-sow in the potting shed on everything from world peace to sweet peas, and I must say I found old Ernest sound and rational."

"But why invent a girl?"

"Oh, he must have a reason, and a jolly good one, too. Rosa does not best leave Juliet in tears for a laugh."

"Where do you get that Romeo and Juliet stuff?" demanded Lady Rosa.

"The language of the younger generation," said the earl, primly, "is as shocking as their attitude toward us oldsters of sixty. You talk as if we had neither eyes nor memories."

"What have you noticed?"

"That E. Bingley is smitten with R. Bingley; but R. Bingley considers E. Bingley a wren, a quince, a twirl and a poor thing."

"That's not so, dashed Rosa. 'I love Ernest and you know it.'"

"Of course I know it, dear," said the earl. "I've known it since I saw you playing house in the tree-tops."

"Do you mind?"

"I do," said the earl.

"Why? Because you think the gossip will say I married him—I mean I would have—for his money?"

"That's a lot of turtle-soup," said the earl. "It's just as easy to love sincerely a rich man, as a poor one. But we Bingleys don't marry for money. Wish one of us had—"

"Why do you object to Ernest?"

"You need not glare at your venerable dad like that, Rosa. I don't object to Ernest as Ernest. I just happen to think that no man that ever had knees and elbows is worthy of my darling daughter."

Rosa smiled.

"Would you give us your blessing?"

"Ernest is oaky-donkey by me," said the earl.

"You're a dear old dear," cried Rosa and kissed him.

"Thank you," said the earl, "but I must point out that before one can make 'happensetter' one must bag the bunny."

"I'm not trying to bag Ernest, and he's not a bunny," retorted Rosa, haughtily. "I just want to tell him what I think of him for telling me such an outrageous lie."

"Oh, I see," said the earl. "Well, here we are. Paddington. And what a beauty day it is. Suppose you start out to cover the swanger hotels. I'll give the bars a try. Then you phone me at my club at seven. I'll be there, dressing for dinner."

"Are you taking me to dinner, father?"

"Sorry. I'm booked to dine and do a show with Puggy Iverson. Old Russian together, and so on."

"When do you meet him?"

"Seven-thirty sharp. At his club. Arranged it yesterday."

"Sorry. I'm booked to dine and do a show with Puggy Iverson. Old Russian together, and so on."

"When do you meet him?"

"Seven-thirty sharp. At his club. Arranged it yesterday."

"We have lots of books but no shelves. No one seems to lend shelves."

Speaking of the problem of places to go for the summer vacation, there is always the last resort: home.

"He may be late."

"Not Puggy. Always on the dot."

"He may be just a little late," said Rosa. "I read in The Times this morning that he is in India."

"Well, well," said the earl. "He must have flown out last night. How these cabinet ministers do get about!"

"Pity to waste your theatre seats," said Rosa. "What are you going to see?"

"Pantomime at the Haymarket."

"I love pantomimes," Rosa said. "Maybe if I had a mink coat you'd take me."

He caught up his umbrella.

"I'll take you across my knee, you imp," he cried.

They both laughed.

A minute later they debouched from the train.

"Good hunting, dear child," said the earl as they parted in Piccadilly Circus.

But it was not good hunting.

When she phoned her father at his club at seven she said, wearily, "He's not at any of the better hotels."

"He's not in any of the better bars," reported the earl.

"I put advertisements in the personal columns of all the newspapers," said Rosa.

"What did I," said the earl.

"What are we to do?"

"Keep looking," said the earl. "And don't worry. If he's in London we'll find him."

"He must be here," said Rosa. "No ship sails to New York for three days."

"Check with me tomorrow morning at nine," the earl said. "Now I must chop off our chat. I've got to crawl under the bed and look for my shirt-studs."

"So Puggy Iverson did get back from India, after all," said Rosa.

"Suppose you go back home to the zoo," said her father and hung up.

Lady Rosa almost did go to the zoo. Lady had tried nearly every other place where an American millionaire might be. She decided to dine at Nero's, instead.

To dine at Nero's was an extravaganza, Rosa knew, if your purse made you study the right hand side of the menu; but there would be no food to give her strength; and she knew that the fact that Nero's was the most expensive restaurant in the world gave it an irresistible lure for visiting Americans of means.

### Admits It Was Hard

But Treatment Restored Youth According To Venerable Hindu Sage

Do you want to prolong your life? Then you might try the treatment 77-year-old Pandit Madan Mohan Malaviya, vice-chancellor of the famous university at Benares, India, and one of the holiest and most revered men in India, has completed. It consists simply of a regime of food in the dark, drinking water, buffalo's milk and partaking of certain herbs with a little honey and butter.

Pandit Malaviya declares 40 days of this rejuvenation treatment increased his weight by nine pounds, improved his eyesight, darkened his hair, restored his old voice, improved his complexion, enabled him to walk erect, and restored his memory.

"It was a hard ordeal," said the venerable Hindu sage. "I did not see the Hindu for 40 days. I was all alone in a cottage, and lived most of the day and night in the pitch dark. Bath, exercise and massage were forbidden, nor was I permitted to have a shave. Throughout the period of my treatment I was allowed to drink hot water. My diet consisted of black cow's milk."

The Pandit disclosed his doctor was Tapai Baba, reputed to be 172 years old, a herb practitioner, and said to possess the real "secret of youth."

Speaking of the problem of places to go for the summer vacation, there is always the last resort: home.

We have lots of books but no shelves. No one seems to lend shelves.

Each pad will kill flies all day and every day for three weeks. 3 pads in each packet. 10 CENTS PER PACKET at Druggists, Grocers, General Stores. THE WILSON FLY PAD CO., Hamilton, Ont.

Canada produced 355,121,000 pounds of butter during 1936.

### Police Patrol For Bridge Opening

Links Canada With United States Over St. Lawrence River

A colorful police patrol has been ordered at the boundary between the United States and Canada for the official opening of the New Thousand Islands International Bridge between Clayton, N.Y., and Ivy Lea, Ontario, near Brockville, on August 18th. Canadian Mounties will co-operate with New York state troopers in regulating the tens of thousands of automobiles and the more than a hundred thousand persons expected to attend the dedication of this new connecting link between the two countries.

Royal Mounted Policemen, in red coats and sombreros, and New York State Police in their grey will join in policing both sides of the St. Lawrence River at Clayton for the three-day celebration. A special corps of marine police is planned to regulate river traffic during the three days, particularly on August 20 when a marine parade will provide spectators with the greatest assemblage of pleasure craft ever exhibited on the St. Lawrence.

Arrangements are being made between headquarters of New York State Police and the Royal Mounties for privileges to cross the border in handling the anticipated crowds. The actual dedication of the bridge, at which President Roosevelt has tentatively accepted an invitation to attend, will be held on Wexley Island, one of the largest in the Thousand Islands group.

The new bridge, which in five separate spans and 8½ miles of approaches and roadways links Canada with the United States over the St. Lawrence river and the Thousand Islands, crosses almost the exact spot in the river where the latest hostilities between the two nations occurred a century ago during the Patriot War.

The incident was the plundering and burning of the Canadian-owned steamer Robert Peel by a band of 22 men disguised as Indians. The leader of the raid was William Johnson, a former Canadian soldier who married an American. As a result of Johnson's act, both governments placed steamers in the St. Lawrence to guard the border.

But the patrol boats remained in the river only a few months. Late in 1838, further agitation was discouraged in public meetings and newspapers and sentiment began to develop to promote peace and harmony between the two nations.

### Skin Test

Scientists Say It Changes In Elasticity During Disease

Ability of the human skin to stretch is a newly discovered prognosticator of death or recovery in several serious diseases. The methods of using skin stretch, worked out at Tulane University School of Medicine, were reported to the American Medical Association by Dr. William A. Soderman and Dr. George Burch.

The skin, which doctors call "the outer defense of the body," changes in elasticity during disease. The change is connected with alterations in the pressure in body tissues. The Tulane physicians have worked out methods of measuring both skin stretch and tissue pressure and of using them to foretell the extent of illness and the patient himself feels a change.

In disease the skin tightens the tissue, pressure rises. In health the abdomen skin has the greatest elasticity, six times as much as that of the shin bone, and twice as much as the skin on the back of the hand. Why, the physicians said, is not known.

The pressure in the tissues of the back of the hand is equal to a column of water half an inch deep. From this low it ranges up to 1½ inches of water for leg tissues. But in some diseases the tissue pressures are multiplied up to 10 or 15-fold.

Figures recently published in England show that more than 500,000 persons were killed or injured on London streets in the last 10 years, private cars being responsible for about one-third of the accidents.

The new Oxford Dictionary sanctions the phrase, "Am I I?" But Yale's Professor William Lyon Phelps never got to first base trying to popularize "Am I I?" as a contraction for "Am I not?"

A three-minute telephone conversation between any points in Great Britain can be made at night for 25 cents.

Canada produced 355,121,000 pounds of butter during 1936.

### Names Almost Unknown

Few Of Younger Generation Ever Heard Of Pioneer Ocean Flyers

Nineteen years ago—on June 14, 1919—Lieutenant Arthur Whittell Brown and Captain John Alcock, D.S.O., took off from Newfoundland in the first attempt to fly across the Atlantic. Their machine was an ordinary double-engine biplane, a Vimy bomber. Sixteen hours later (a record that held for ten years) they landed in Ireland. It is recalled that when they emerged from the machine Brown's only comment to his partner was: "How's that for a fancy bit of navigating?"

For a time they lost all sense of direction and even horizontal sense. Once when the fog lifted they found, to their horror, that the machine was rushing downward in a mad spiral. With the waves only a few feet from them, they zoomed upwards so steeply that they had to loop to escape the retribution of the sea. They never sighted a ship and the weather was so foul that only four times were they able to take readings.

At last the white-tipped rollers on the Galway coast told them that they were nearing victory's end. So the Newfoundland exchange suggests marking the occasion in some suitable manner. A tribute to these courageous Englishmen who blazed the trail for Lindbergh and others is indeed long overdue.

It is a sad commentary on our indifference to a great Empire achievement that the names of these men are unknown to many of the younger generation, to whom later and less important exploits in aviation are familiar history.

### In The Farmer's Yard

An Appreciation Of The Value Of Improved Surroundings

It is a mistake to think that the farmer does not appreciate the true value, both monetary and as to his outlook on life, of having attractive home surroundings and neat, tidy farm barns and lands.

Circumstances such as shortage of help and available cash and the inability because of the early Spring rush to get at the beautification work, prevents him from doing as much as he would like. But if one cares to peer back behind the routine fences he will find in many cases the farmer, and the farmer's wife and their children have not let things "go to rack and ruin."

They will find just as much beauty and orderliness there as one finds in the backyards of the homes of urban dwellers, and the habit of tidying up and keeping that way is growing, not diminishing, due partly to the general use of the motor car having increased the number of visitors to the country roads, and partly to increased appreciation by the farmers themselves of the value of improved surroundings.—St. Thomas Times-Journal.

### Might Be Successful

Expedition Suggested To Investigate Mystery Of Loch Ness Monster

A scheme is afoot to send an expedition, equipped with natural scientific instruments, to investigate the mystery of the Loch Ness monster—the expedition to be financed by a limited liability company, with shares at a shilling. Considered as an investment, this appears somewhat perilous, says the Christian Science Monitor; for the monster cannot be floated so easily as the company, and if he insists on the complete liquidation of his environment, his example must spread, one imagines, to the company's affairs. On the other hand, this may be the gesture for which he has been waiting; and with a battery of telephoto cameras, and a trained sounder, arranged finders, thus trained upon him, he may well feel that his performance will at last be recorded in a manner worthy of it, and attain the public it deserves.

Wife: "I want some money." Hubby: "Say, what did you do with the last dollar I gave you?" Wife: "I spent 37 cents in 1936, 40 cents in 1937, and 23 cents this year."

The peccary is the only native wild pig in North America.

### Co-operative Organization

Lays Blame For Present Conditions On The Average Citizen

Outlining the evils of the profit-motivated economic system, Morris Erickson, secretary of the North Dakota division of the Farmers' Educational and Co-operative Union of America, laid the blame of present conditions at the door of the average citizen.

He addressed a public meeting in Saskatoon held in the interest of the co-operative movement and declared: "We have no right to ask the government to do for us what we as individuals refuse to do for ourselves."

"We are doing penance for being indifferent to the liberty that comes with democracy," he maintained and insisted that conditions could be corrected if mass intelligence was put to work. In North Dakota almost every farmer had finally decided that the solution to their problems was to be found in self-help through economic co-operative action.

Of approximately 6,500,000 farmers in the United States, 5,000,000 of them were either bankrupt or so close to it that they were no longer freeholders. Farmers controlled less than 21 per cent. of the equity in the land of North Dakota, security and borrowing power were exhausted and 200 great corporations in the United States controlled the economic life of every American citizen.

Co-operative organization, Mr. Erickson argued, offered the check to such procedure. It was directly contrary to the profit system and gave service at cost through collective ownership. He quoted instances to show that co-operatives had been proven successful.

### Working On Canadian Ores

Madame Curie-Joliot Seeking Method To Recover Radium

Madame Curie-Joliot, daughter of the famed discoverers of radium, is at work on ores from Canada's Great Bear Lake radium deposits. It was disclosed by F. B. Friendly, radium expert, that she had arrived in Ottawa to speak before the Society of Chemical Industry.

Her objective is the development of commercial methods for the recovery of other minerals of the radium group, particularly radium D which have not yet been produced industrially. Mr. Friendly said.

Radium D is now found in the lead which is separated from the ores during the process of extracting radium of medical use. Polonium, another radio-active element, also discovered by the Curies, is likewise present in Canadian pitchblende but has yet to be produced on a commercial scale.

The question is raised whether a snail has any teeth. Well, he always seems to move as if on the way to the dentist, doesn't he?

During 1932, 5,560 motor cars were stolen in the metropolitan area of London.

**Bankf School of Fine Arts To Be Again Held This Summer**

Bankf Made Permanent Locality For School—\$15 Scholarships to be Given

The Bankf School of Fine Arts will be conducted during the summer of 1938 as in previous summers. It has been gratifying to those responsible for its organization to realize the broad general interest aroused, as evidenced by the large annual attendance since its inception. This has resulted in the provision of a special building by the Bankf School Board having as a major purpose the accommodation of this school. This will make Bankf the permanent location for this School and will assure its growth and influence in the future.

In the program offered, provision is made for Fine Art and Design under the general auspices of the Provincial Institute of Technology and Art in co-operation with the Extension Department of the University of Alberta. To encourage those who desire instruction in the drawing and painting phase of Art work, there is made available by the Committee in charge, limited number of scholarships for the 1938 season. These scholarships will have a value of \$15 each as payment of fees for tuition in an Art course. There will be nine in all; one each for competition among those residing in the various districts of Alberta. It is hoped that many will avail themselves of this opportunity and participate in the competition.

The Alberta Society of Artists will provide a scholarship to the amount of the tuition fee at the Bankf School of Fine Arts—Painting Department—to be awarded to the artist whose work is judged superior. This competition is open to any resident of the Province of Alberta and may be competed for by those who previously held other scholarships. Otherwise the general rules governing the above District Scholarships will obtain in this competition.

For further information communicate with the Provincial Institute of Technology and Art, Calgary, or the Extension Department of the University of Alberta, Edmonton.

## Local News

Mr. A. J. Girven, of Drumheller, visited his aunt, Mrs. Isbister, on Wednesday.

Mr. Mat Gruber, of Hanna, visited with Chinook friends on July 1st.

Miss Irene Shier, who has been teaching near Bindleys, arrived Friday making a short visit at her home before going to Calgary where she will attend summer school.

Miss Ruth Robison visited with Miss Phyllis Demare on the farm last week.

Mr. Geo. Aitken was a Drumheller visitor on Wednesday.

Mr. Bill Youell spent the week end at Alask.

Miss Chrissie Coutts and Gordon, who have been attending school here with their mother Mrs. J. Coutts, returned to the farm.

Mr. Jas. Durr, C. N. R. Relief Agent, is working at Alask for a short time and Mr. W. Gallagher is looking after his work here.

Mr. F. Morrell is attending summer school at Edmonton and Mrs. Morrell and children are visiting at Owen for a few days.

## Crested Wheat A Valuable Forage Crop

The superiority of crested wheat grass as a perennial forage crop in the drier areas of Western Canada has been amply demonstrated during the past decade. It fulfills a long recognized need for a perennial grass that will persist and produce feed under dry land conditions. Experience has shown also that this grass is of value in somewhat more moist areas as stated by Dr. T. M. Stevenson, Dominion Forage Crops Laboratory, University of Saskatchewan. The fact that it is ready to be pastured from ten to twenty days earlier in the spring of the year than the native or other cultivated perennial grasses makes it of great value as a pasture crop, even in the more humid areas.

In addition to being the most drought resistant of Canadian cultivated perennial grasses, crested wheat grass is extremely hardy and has never shown any tendency to winter kill even under the most severe conditions. It is a long lived perennial grass but does not produce creeping roots and may be eradicated without difficulty when desired. As a pasture plant it withstands tramping and grazing well and produces abundant pasture in the early spring and late fall when other crops produce little. As a soil binding grass it is unequalled by any other cultivated crop in Canada. As a hay crop it has consistently outyielded other cultivated perennial grasses under dry land conditions, and the hay is palatable and nutritious. Even the straw from the threshed seed crop is eaten readily, and excellent results have been reported from its use as feed.

## How Does Life Insurance Benefit The Farmer's Wife and Children?

**Answer.**—If the farmer has Life Insurance, the wife and children know that they will not be in want in case of his death.

**Question.**—How would insurance help?

**Answer.**—It would provide money for living expenses, to pay debts, meet mortgage payments, hire help, avoid sale of the farm at a sacrifice.

**Q.**—Couldn't this be done through ordinary savings?

**A.**—Usually a farmer leaves only a small amount of cash. Nor can he be sure to live long enough to save an adequate sum. Only through Life Insurance can he, with a minimum of saving each year, have the necessary money available in case of death.

**Q.**—How do the children benefit?

**A.**—The father who has Life Insurance is sure that the children will have the home, care and education that he intended.

**Q.**—How does Life Insurance benefit the farmer himself?

—If he lives to a retiring age, his insurance will provide a cash income to care for him.
